

Broadband transmission of internet signals over powerlines (BPL) is a terrible idea except for the people who would directly profit from it.

Beyond the obvious concerns of many licensed amateur operators, like myself, who would be affected by the Shortwave noise of BPL - it would negatively impact over-the-air broadcasts of COMMERCIALLY LICENSED BROADCASTERS, LICENSED UTILITY RADIO INTERESTS and even transmissions of our U.S. MILITARY. BPL would spell disaster in many markets.

I urge the FCC not to give in to a small but powerful lobby who would cause environmental destruction not just to Ham Radio Operators, but to COMMERCIAL INTERESTS as well.
